ABHA Creation via Face Auth (QR based)

Step 1: Generate Transaction ID

API - https://abhasbx.abdm.gov.in/abha/api/v3/enrollment/enrol/auth/init

Request Payload

```
{"scope":
        ["abha-enrol",
         "face-auth"]
}
```

Response Payload

```
{
  "txnId": "96d21b5c-22b3-484e-b936-06f3735b57d4",
  "message": "Transaction Id generated Successfully"
}
```

Step 2.

2.1 First approach: QR code scan

Use the transaction ID to generate QR code using any QR generator tool or customized code. Open ABHA app and scan this QR code on ABHA App to start and complete the face capture process.

https://phrsbx.abdm.gov.in/face-auth?txnId=10bc499f-42c1-48eb-8c02-6d00a9fd4b42

Sample QR-Code:

2.2 Second Approach: Intent base sharing

This approach is applicable if you want to integrate your mobile application with ABHA App. In this case the above url will be passed directly from your application and it will directly open the ABHA app Face capture Event.

For this ABHA package ID will be shared so that intent could be invoked.

Step 3: Track the status via Capture PID API

Endpoint: https://abhasbx.abdm.gov.in/abha/api/v3/enrollment/enrol/capturePID

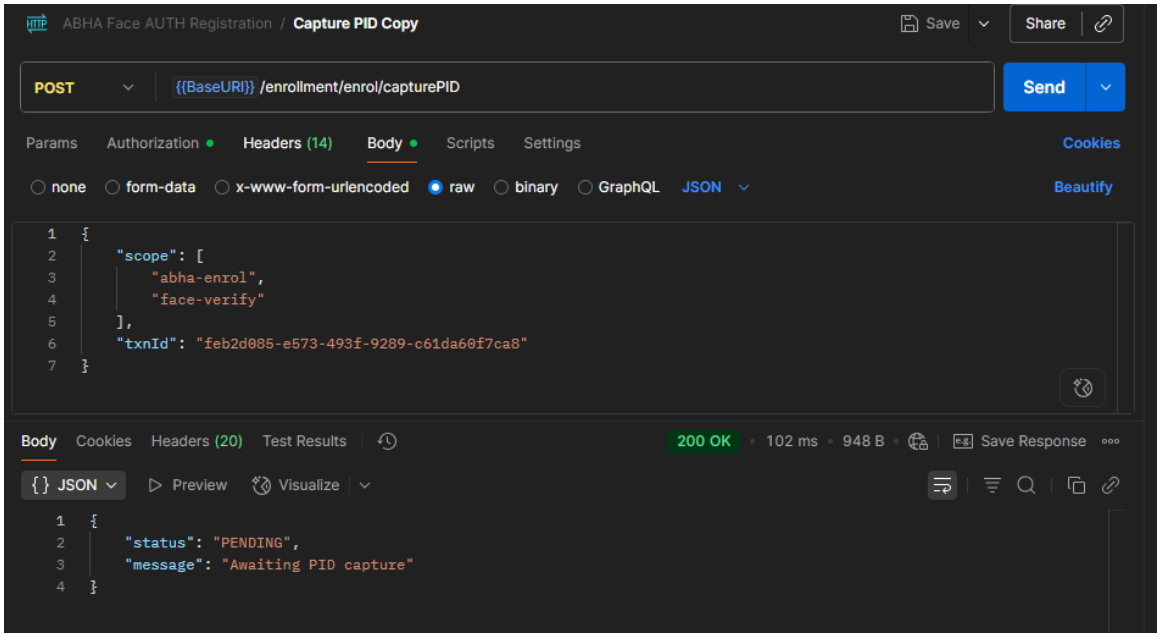
You can poll the **capturePID** API **in every 5 - 10** seconds interval to check the status of face capture process.

Request body contains:

```
{
  "scope": [
    "abha-enrol",
    "face-verify"
  ],
  "txnId":"{{transactionId}}"
}
```

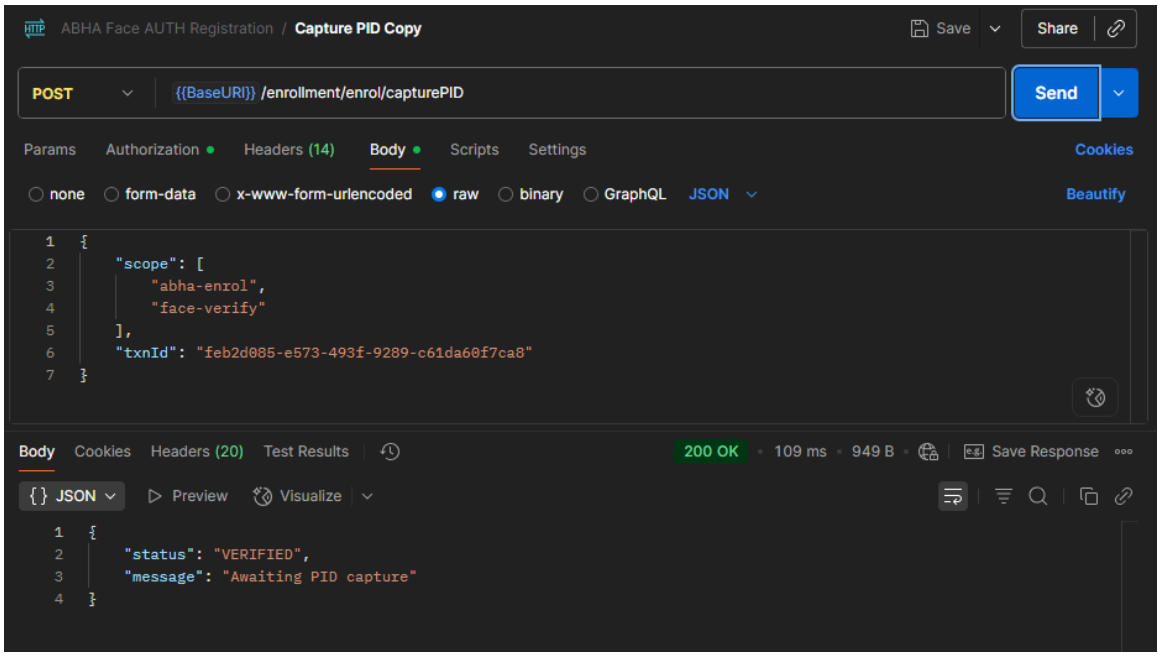
Status: PENDING

If the status in the response is **'PENDING**,' it indicates that the transaction is not yet verified from ABHA App.



Status: VERIFIED

If the response status is **'VERIFIED**,' it means the transaction is verified, but face authentication has not yet been completed.

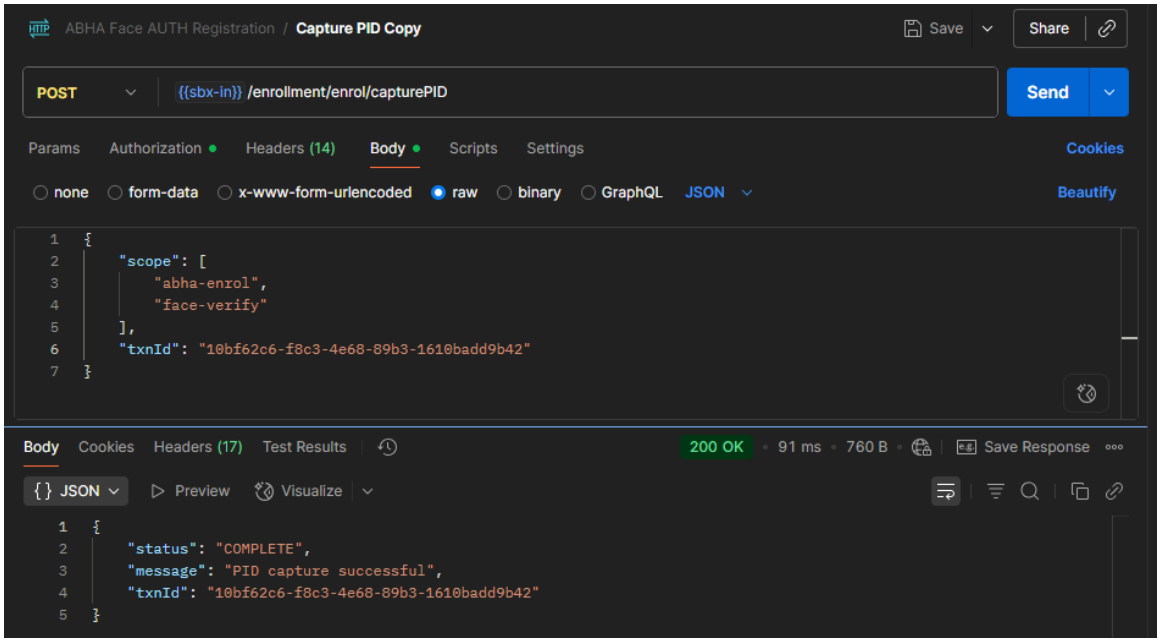


Status: FAILED

If the response status is **'FAILED**,' it means that the face authentication process using the RD service from the ABHA app was unsuccessful due to technical issues.

Status: COMPLETE

If the response status is **'COMPLETE**,' it means the face authentication process using the RD service from the ABHA app was successfully completed, and the user has been authenticated.

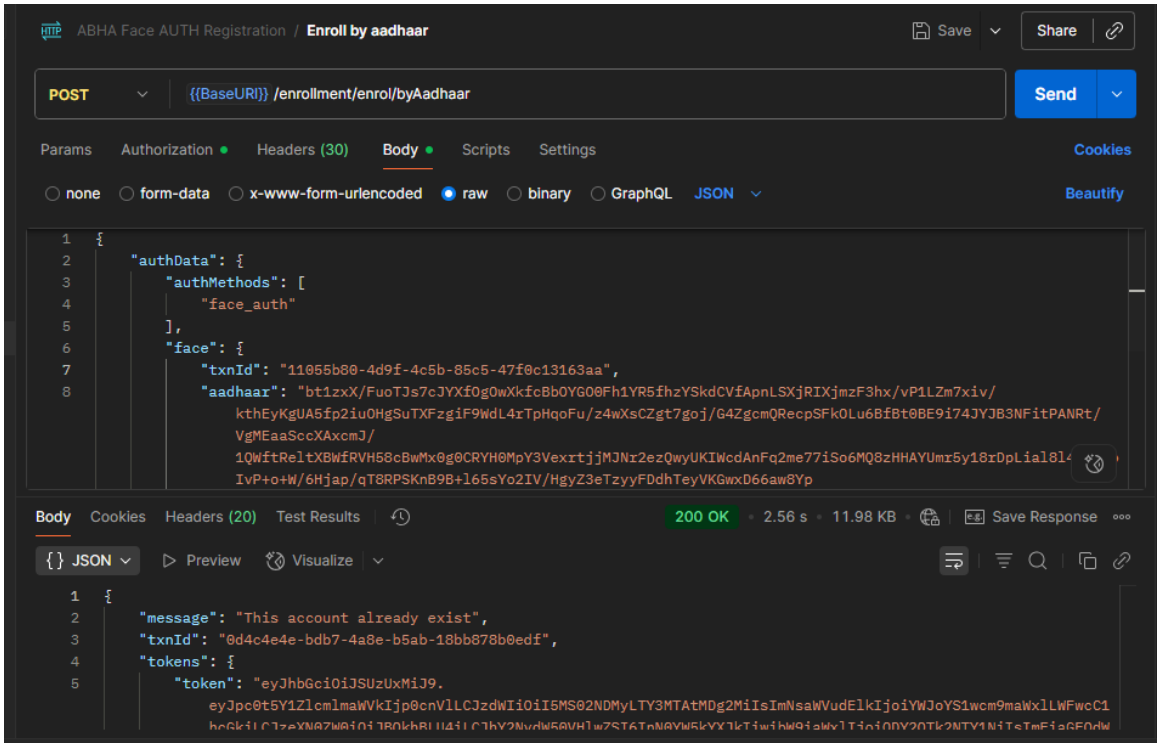


Once the authentication process is successfully completed Call the Enrollment API.

Step 4. Aadhaar Enrollment API

Endpoint: https://abhasbx.abdm.gov.in/abha/api/v3/enrollment/enrol/byAadhaar

In this API, the user must provide an encrypted Aadhaar number along with the corresponding transaction ID. The faceAuth PID will be automatically retrieved from the cache. Based on this information, the system will proceed to create a user's account. If an account already exists, the API will return an appropriate response.



Request Body:

```
{
  "authData": {
    "authMethods": [
      "face_auth"
    ],
    "face": {
      "txnId": "881f2bf5-7377-4067-b50e-1e6ff100b3cc",
      "aadhaar": "{{encrypted_aadhaar_number}}
      "mobile": "{{mobile_number}}"
    }
  },
  "consent": {
    "code": "abha-enrollment",
    "version": "1.4"
  }
```

Response Payload

```
{
  "message": "This account already exist",
  "txnId": "c236a618-a84e-48c2-a2c5-9d9606e757f9",
  "tokens": {
    "token": "{{token}}",
    "expiresIn": 1800,
    "refreshToken": "{{r-token}}",
    "refreshExpiresIn": 1296000
  },
  "ABHAProfile": {
    "preferredAddress": "91323*****8769@sbx",
    "firstName": "Kushal",
    "middleName": "",
    "lastName": "Pandita",
    "dob": "11-02-2000",
    "gender": "M",
    "mobile": "78898****8",
    "mobileVerified": true,
    "email": null,
    "phrAddress": [
      "91*******769@sbx"
    ],
    "address": "",
    "districtCode": "5",
    "stateCode": "1",
    "pinCode": "180005",
    "abhaType": "STANDARD",
    "stateName": "JAMMU AND KASHMIR",
    "districtName": "JAMMU",
    "ABHANumber": "91-****-****-8769",
    "abhaStatus": "ACTIVE"
  },
  "isNew": false
}
```
